

Die lewensiklus van 'n padda

1. Twee paddas paar om die eiers te bevrug.
2. Die paddawyfie lê die eiers.
3. 'n Jong paddavissie met buitekiewe en 'n stertvin kom te voorskyn.
4. Die paddavissie kry pote.
5. Die stert verdwyn.
6. Die volwasse padda ontwikkel longe en verloor sy kiewe.

volwasse padda
