

Plant het sade  
nodig om te groei

sade

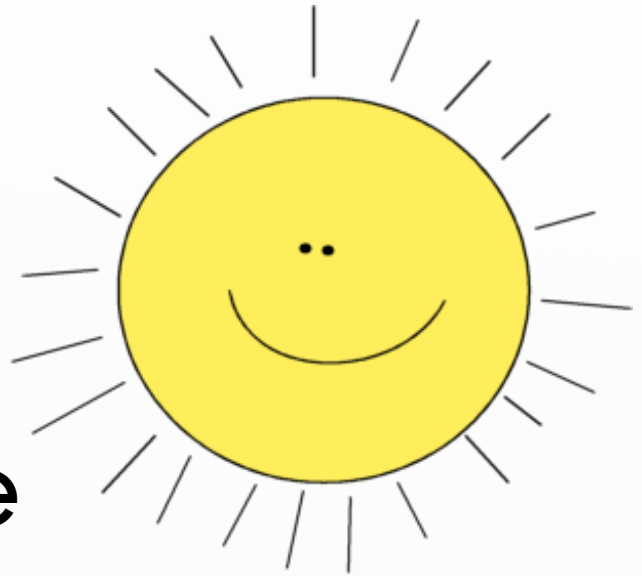

Plante het 3 dinge  
nodig om te groei:

1. Water

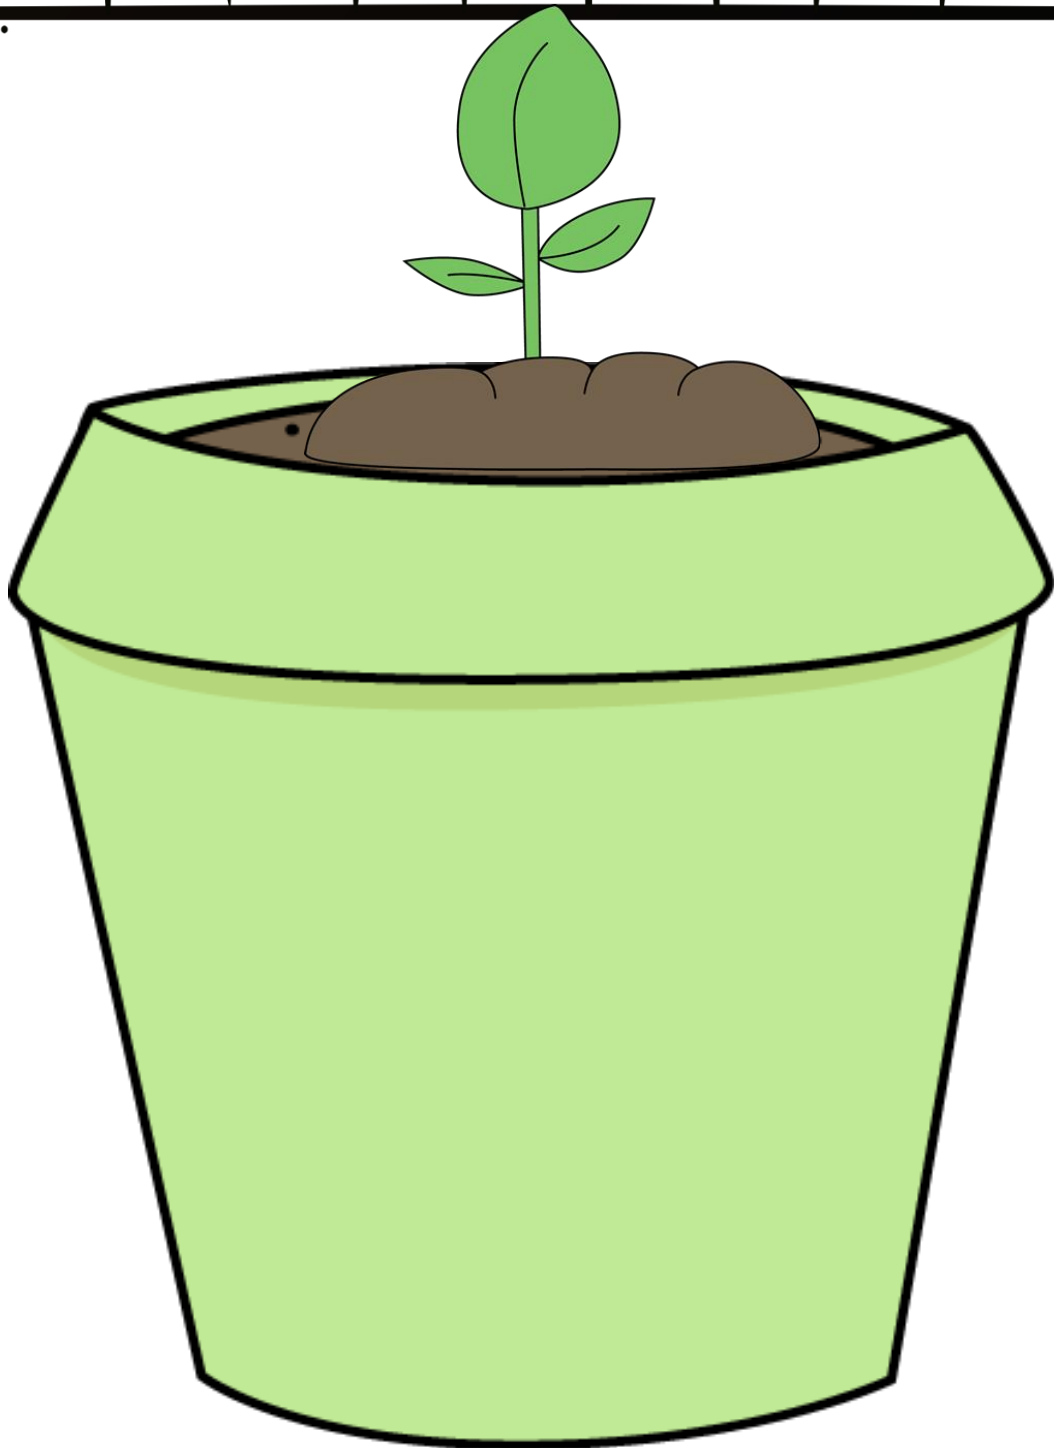

2. Lug

3. Warmte

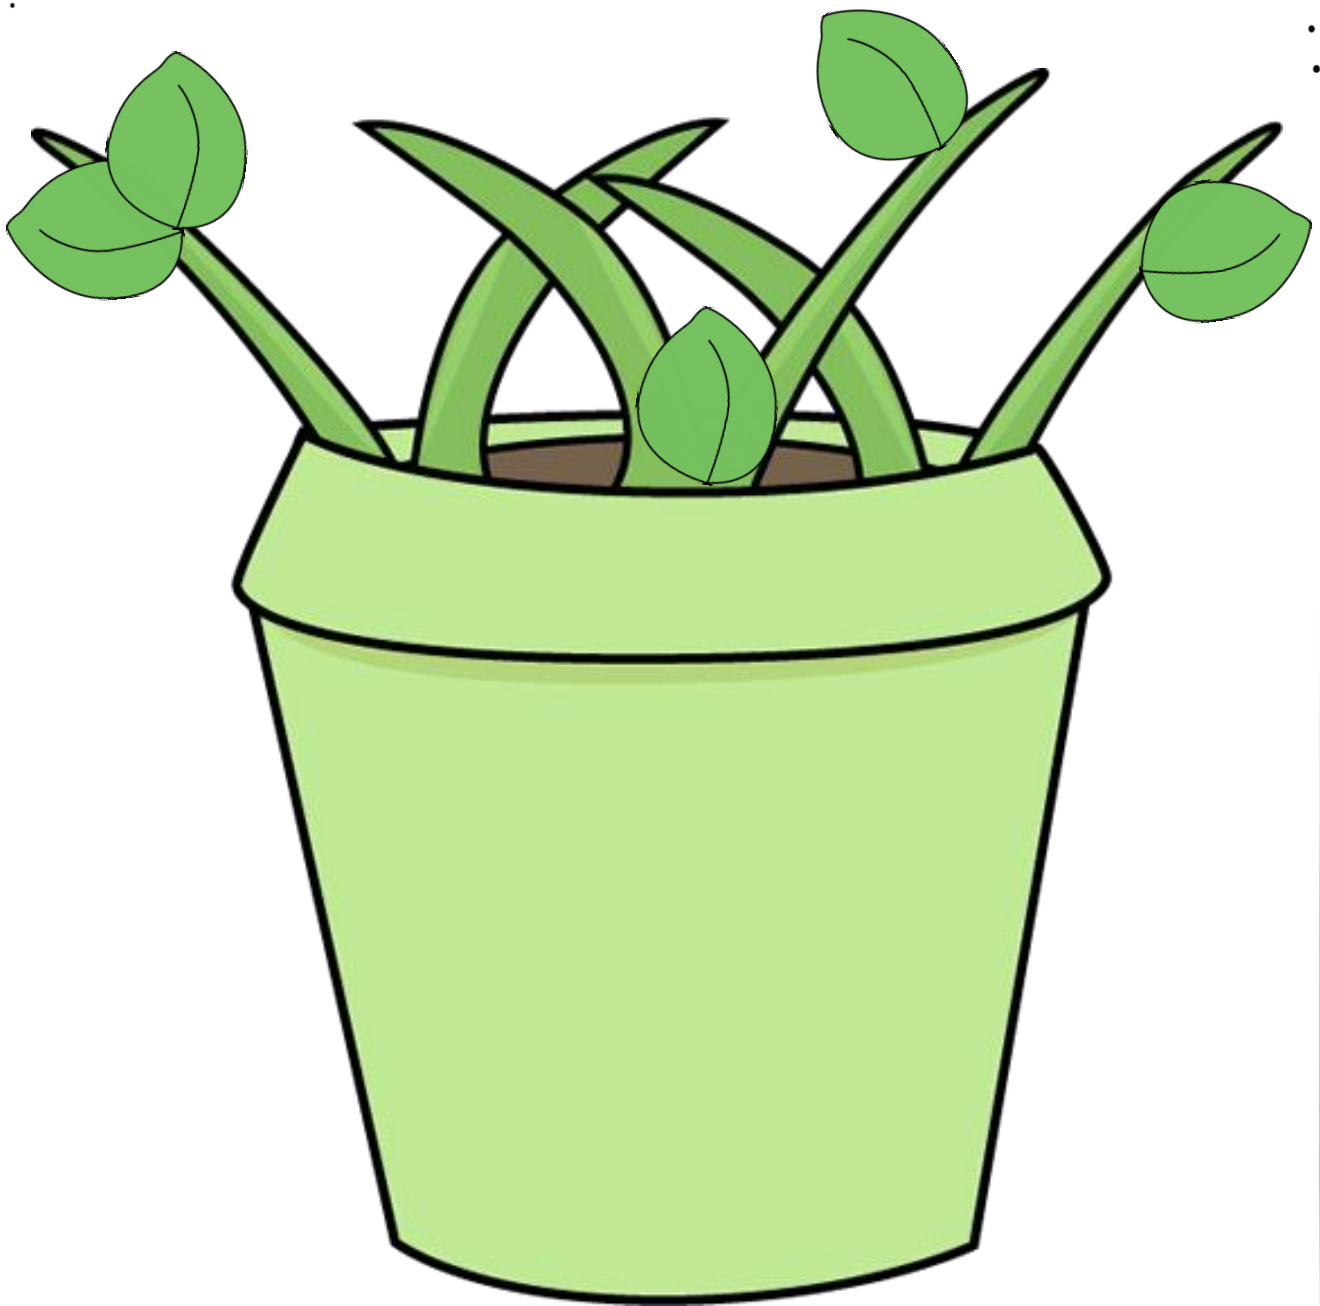

Die saad begin  
ontkiem en wortels  
en 'n blaar kom uit  
die saadjie.

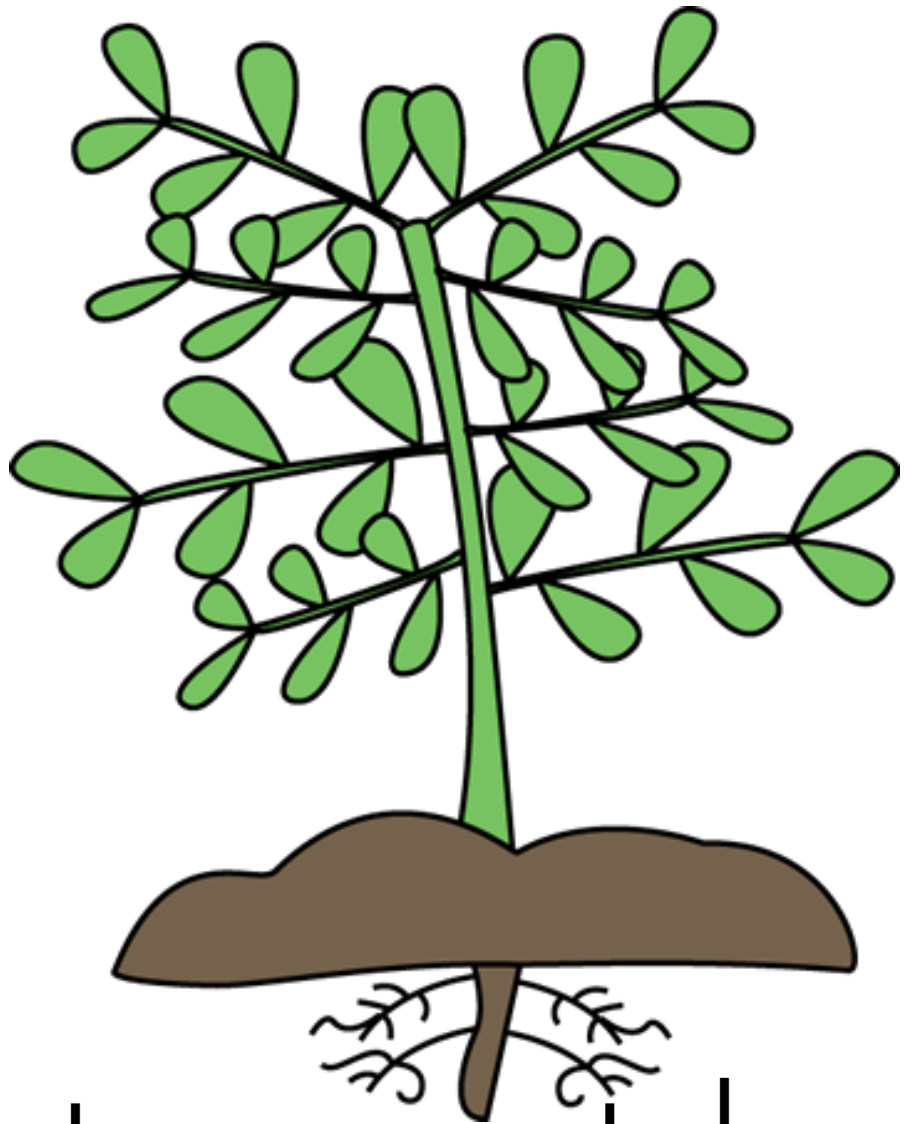

Daar groei nou 'n  
stingel bo die grond  
uit met blare.

Al meer sade het  
ontkiem en bo die  
grond uit gegroei.

'n Plantjie het klomp  
wortels onder die  
grond.

Die plant se wortels  
gee hom kos en  
water uit die grond.

Mooi blomme groei  
nou aan die plant.
