

Plants grow from
seeds.

seeds

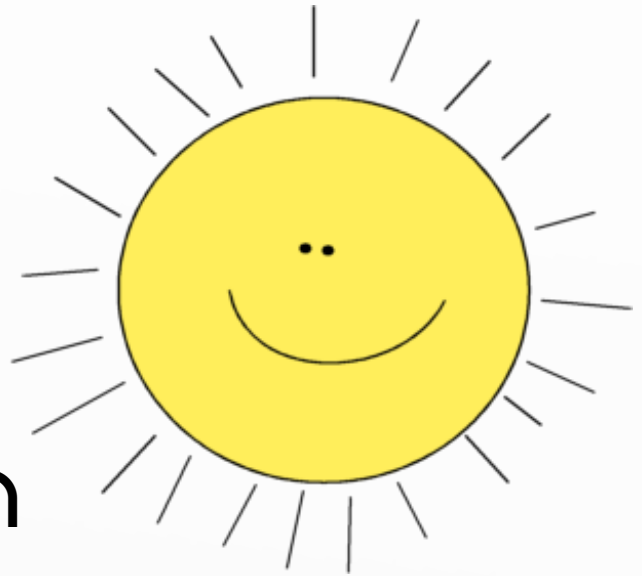

Plants need 3 things

to grow:

1. Water

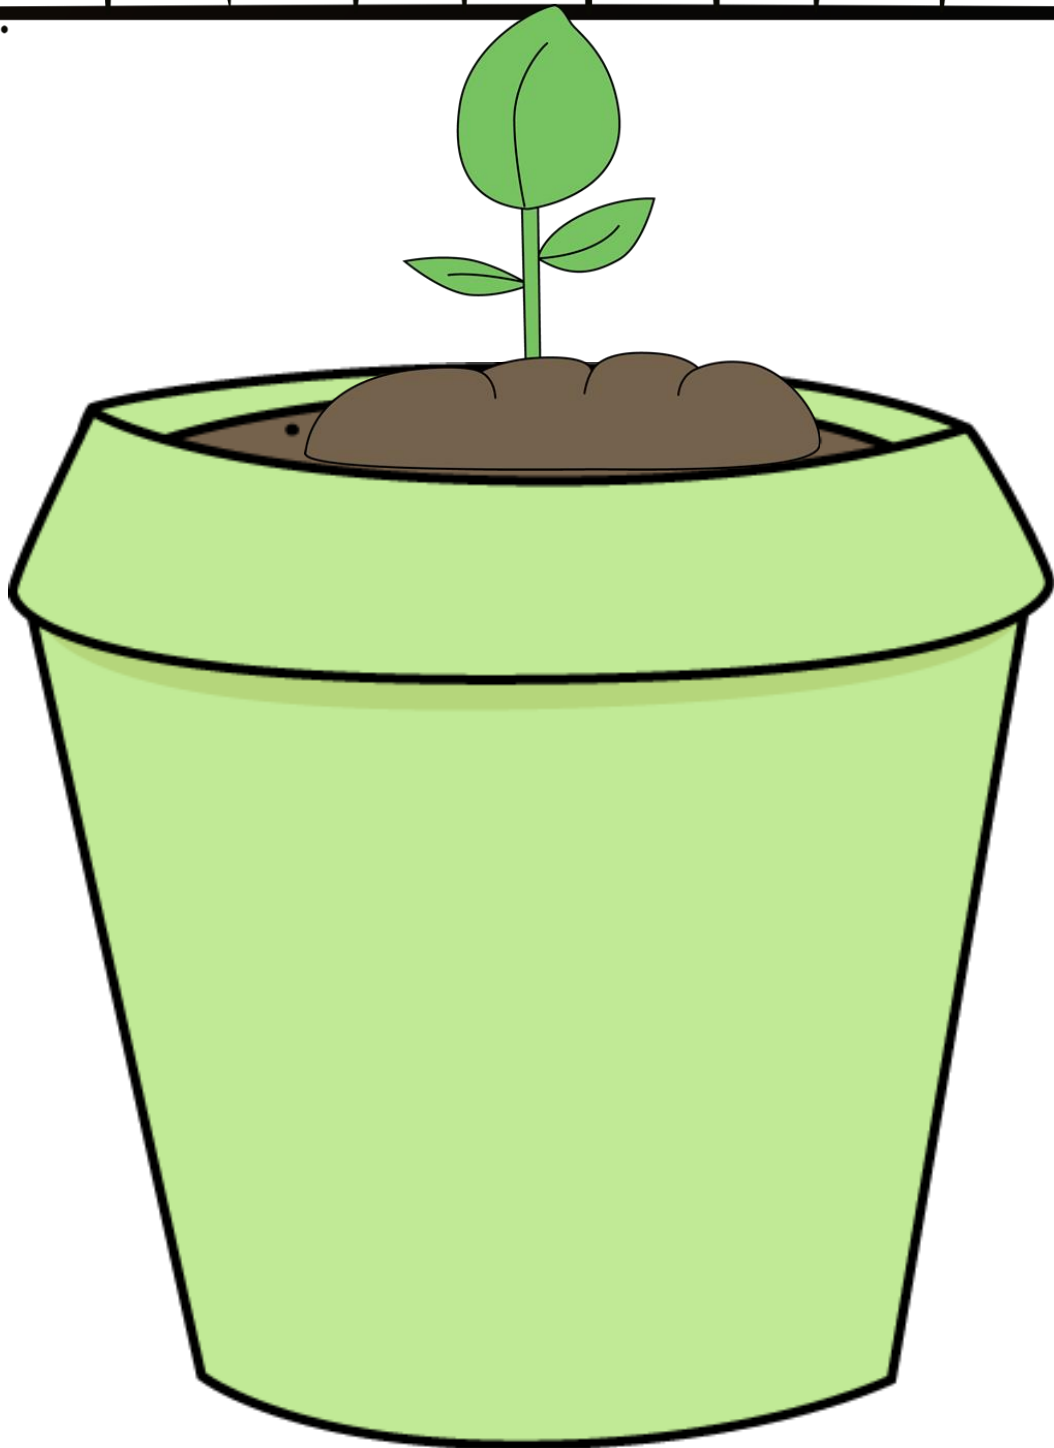

2. Air

3. Warmth

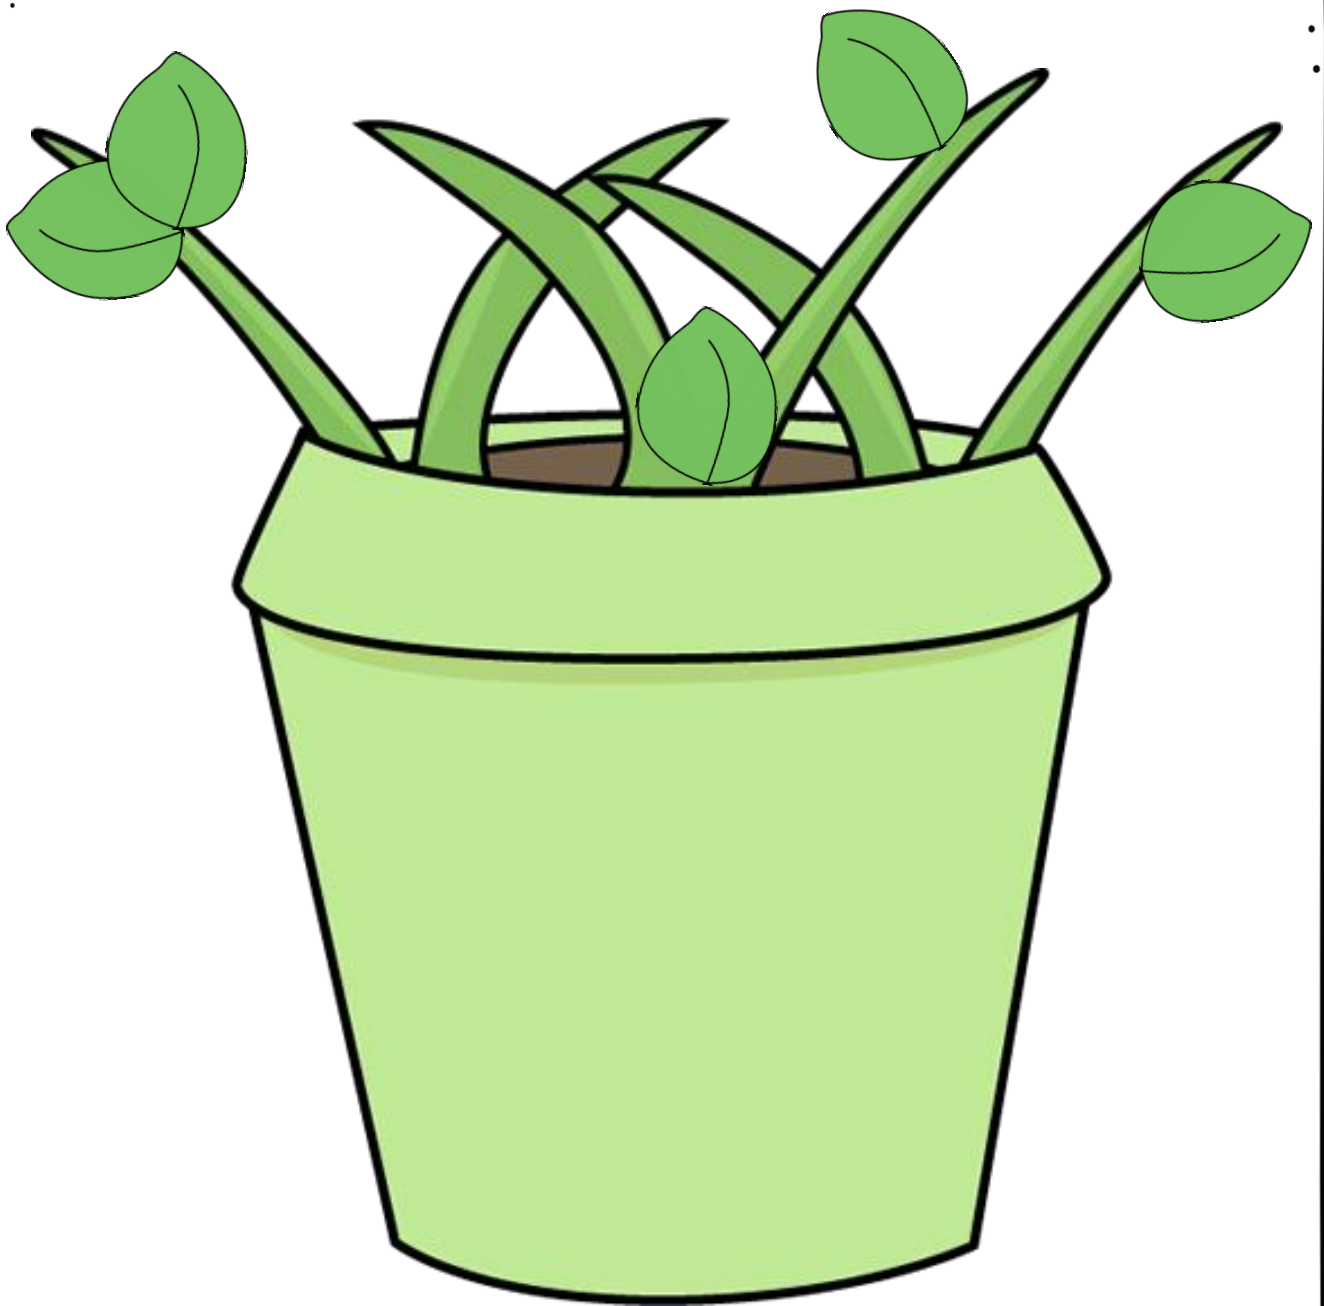

The seeds start to germinate. Roots and a stem start to grow from the seed.

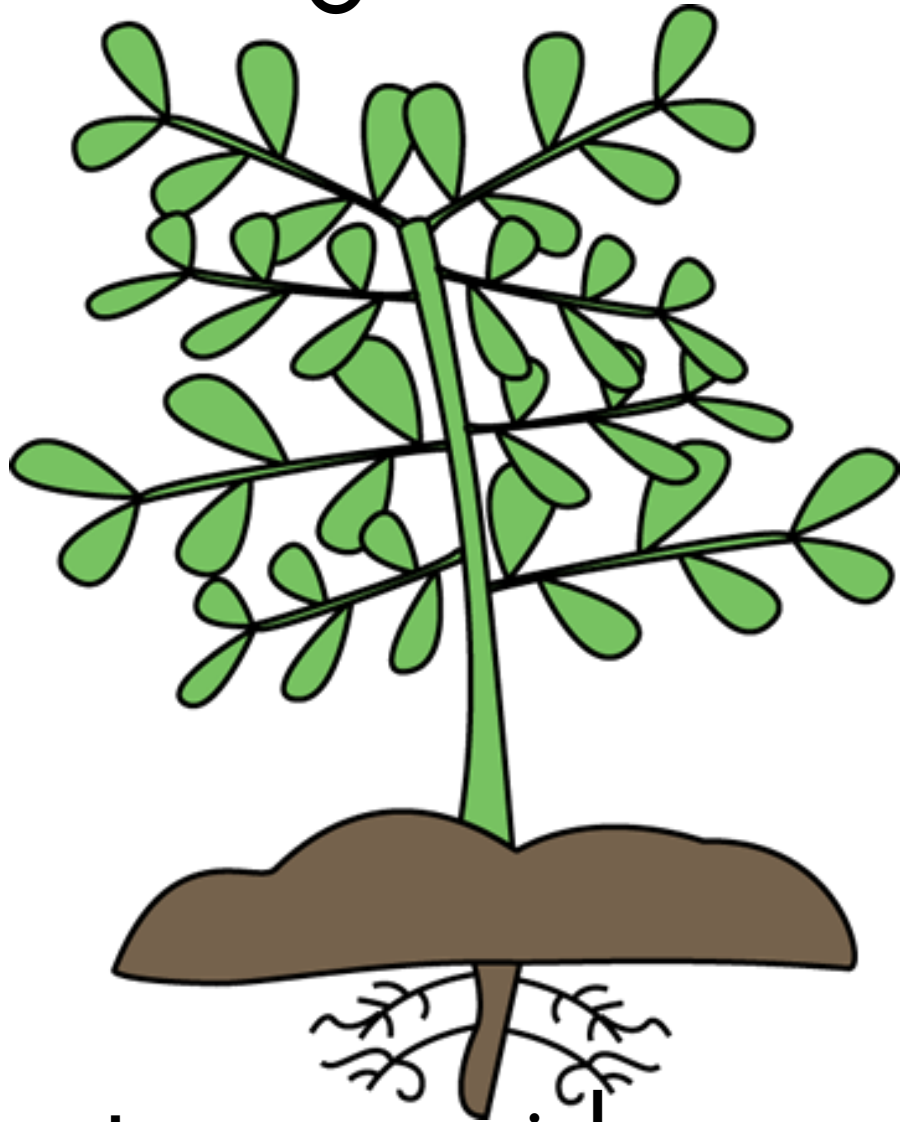

A stem with leaves
starts to appear
above the ground.

More and more seeds
germinate and appear
above the ground.

A plant has lots of
roots underground.

The roots provide
the plant with food
and water.

Beautiful flowers
start to grow.
