

Pollution

What is pollution?

Pollution means the contamination of air, soil, water and the environment.

Loud noises and sounds are also a type of pollution

Types of pollution

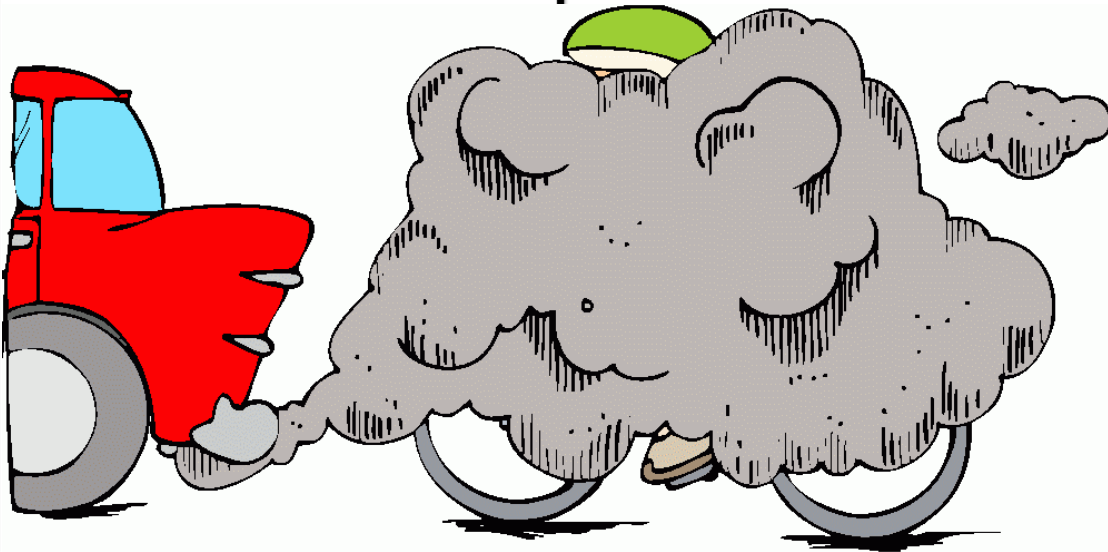

There are 4 types of pollution:

1. Air pollution
2. Water pollution
3. Land pollution
4. Noise pollution

Air pollution

Air is polluted when harmful gasses are released into the air. Smoke which is released from burning coal, fuel, gasses and wood pollute the air.

Water pollution

Water pollution is when underground water is polluted, as well as the water of dams and rivers.

This happens when factories pump dirty water into rivers and when sewage from our toilets leak into the water.

Water pollution

Land pollution

Harmful chemicals can pollute the land.
Land pollution is caused by the waste of
factories and mines.

The plastic and dirt
which we throw on
the ground is also
pollution

Noise pollution

Noise pollution is caused by trucks, the hooting of taxi's, factory machinery, loud music and equipment which is used at building sites.

Too much noise can make you deaf.

STOP pollution!

- Throw your trash in a dustbin.
- Pick up trash when you see it on the ground.
- Help your parents to recycle used materials.
