

What the earth gives us

The earth gives us
most of what we need to live.

Around the earth is a
layer of air. It
contains **oxygen**
which we need to live.

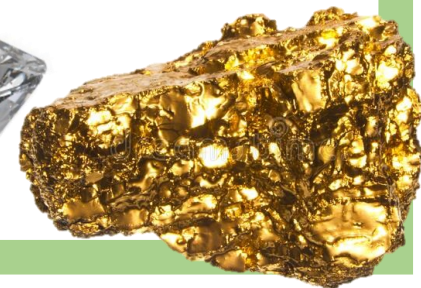

What the earth gives us

The thin layer of earth we live on is called the **crust**. It has **topsoil** in which we plant food.

We get minerals like gold, diamonds, petroleum and coal from the first layer. This layer has hard rock like mountains.

What the earth gives us

We also find the oceans on this thin layer of rock.

- We get fish from the ocean to eat.
- Boats transport goods and passengers on the ocean.
