

WATER TRANSPORT

Water transport has been used by humans for centuries to travel on water or to transport things. This includes lakes, rivers and the ocean.

ROAD TRANSPORT

We are more familiar with road transport. Road transport involves all vehicles moving on a road such as a bus, car, bicycle, motorcycle and so forth.

TRANSPORT BY TRAIN

We can also use railways. They are like paths made of pieces of metal. These paths are called tracks.

Trains travel along these tracks. They carry people and things from one town to another.

AIR TRANSPORT

People fly with large planes over long distances to other cities and countries. It is a very fast way of traveling. Air balloons and parachutes are used for fun and sport.
